Mapping Maternal Health Advocacy
A CASE STUDY OF ZAMBIA

File:

 [Download the case study](#) [1]

In 2013, Family Care International (FCI) conducted a mapping analysis in Zambia to gather information on the maternal health policy environment; the organizations, partnerships, and networks currently and potentially engaged in maternal health advocacy; and the advocacy goals, strategies, resources, and core messages being used. Through desk research and in-depth interviews with key informants, the mapping identifies advocacy priorities, challenges, and opportunities for collaboration.

A parallel mapping was also conducted in Uganda.
