KEY PARTNERS

Approach

- Currently implementing the Health for All campaign in Kenya, Ethiopia and Nigeria
- Collaboration with national and regional governments to provide evidence based advocacy for sensitization on UHC agenda, health care financing and increased funding for medical services
- Assist national governments (Nigeria and Ethiopia) and non-governmental organizations to develop and implement a comprehensive roadmap towards UHC
- In Kenya, launching the Health for All Campaign to:
 - Support the development of strategic plans
 - Support MOH in resource mobilization

Key Achievements

- Launching of the Kenyan Health for All Campaign to advance the UHC agenda
- In order to mobilize resources and advocacy work, we supported MOH programs to prepare grant proposals for funding
 - With support to MOH for FP program, approximately \$18 million and \$11 million worth of commitments for FY2011/12 and 2012/13 respectively, were made by donors for Family Planning commodities in Kenya.
 - From Global Fund for HIV/AIDS, TB and malaria. Under GF Round 10, \$345 million released to Kenya for HIV/AIDS, and another \$136.9 million for malaria.

- Helped develop public/private partnerships in several countries that expand service provision, generate revenue and save costs. In South Africa, for example, we helped develop a partnership between a private hospital group & the Ministry of Health that resulted in significant improvements to services and cost savings at a hospital in the Eastern Cape.
- Developed user fee systems for both public & nongovernmental organization service providers. This has assisted public hospitals in Africa to provide medicines at low cost when the government budget has been insufficient and NGOs in many countries to sustain services when donors have stopped funding

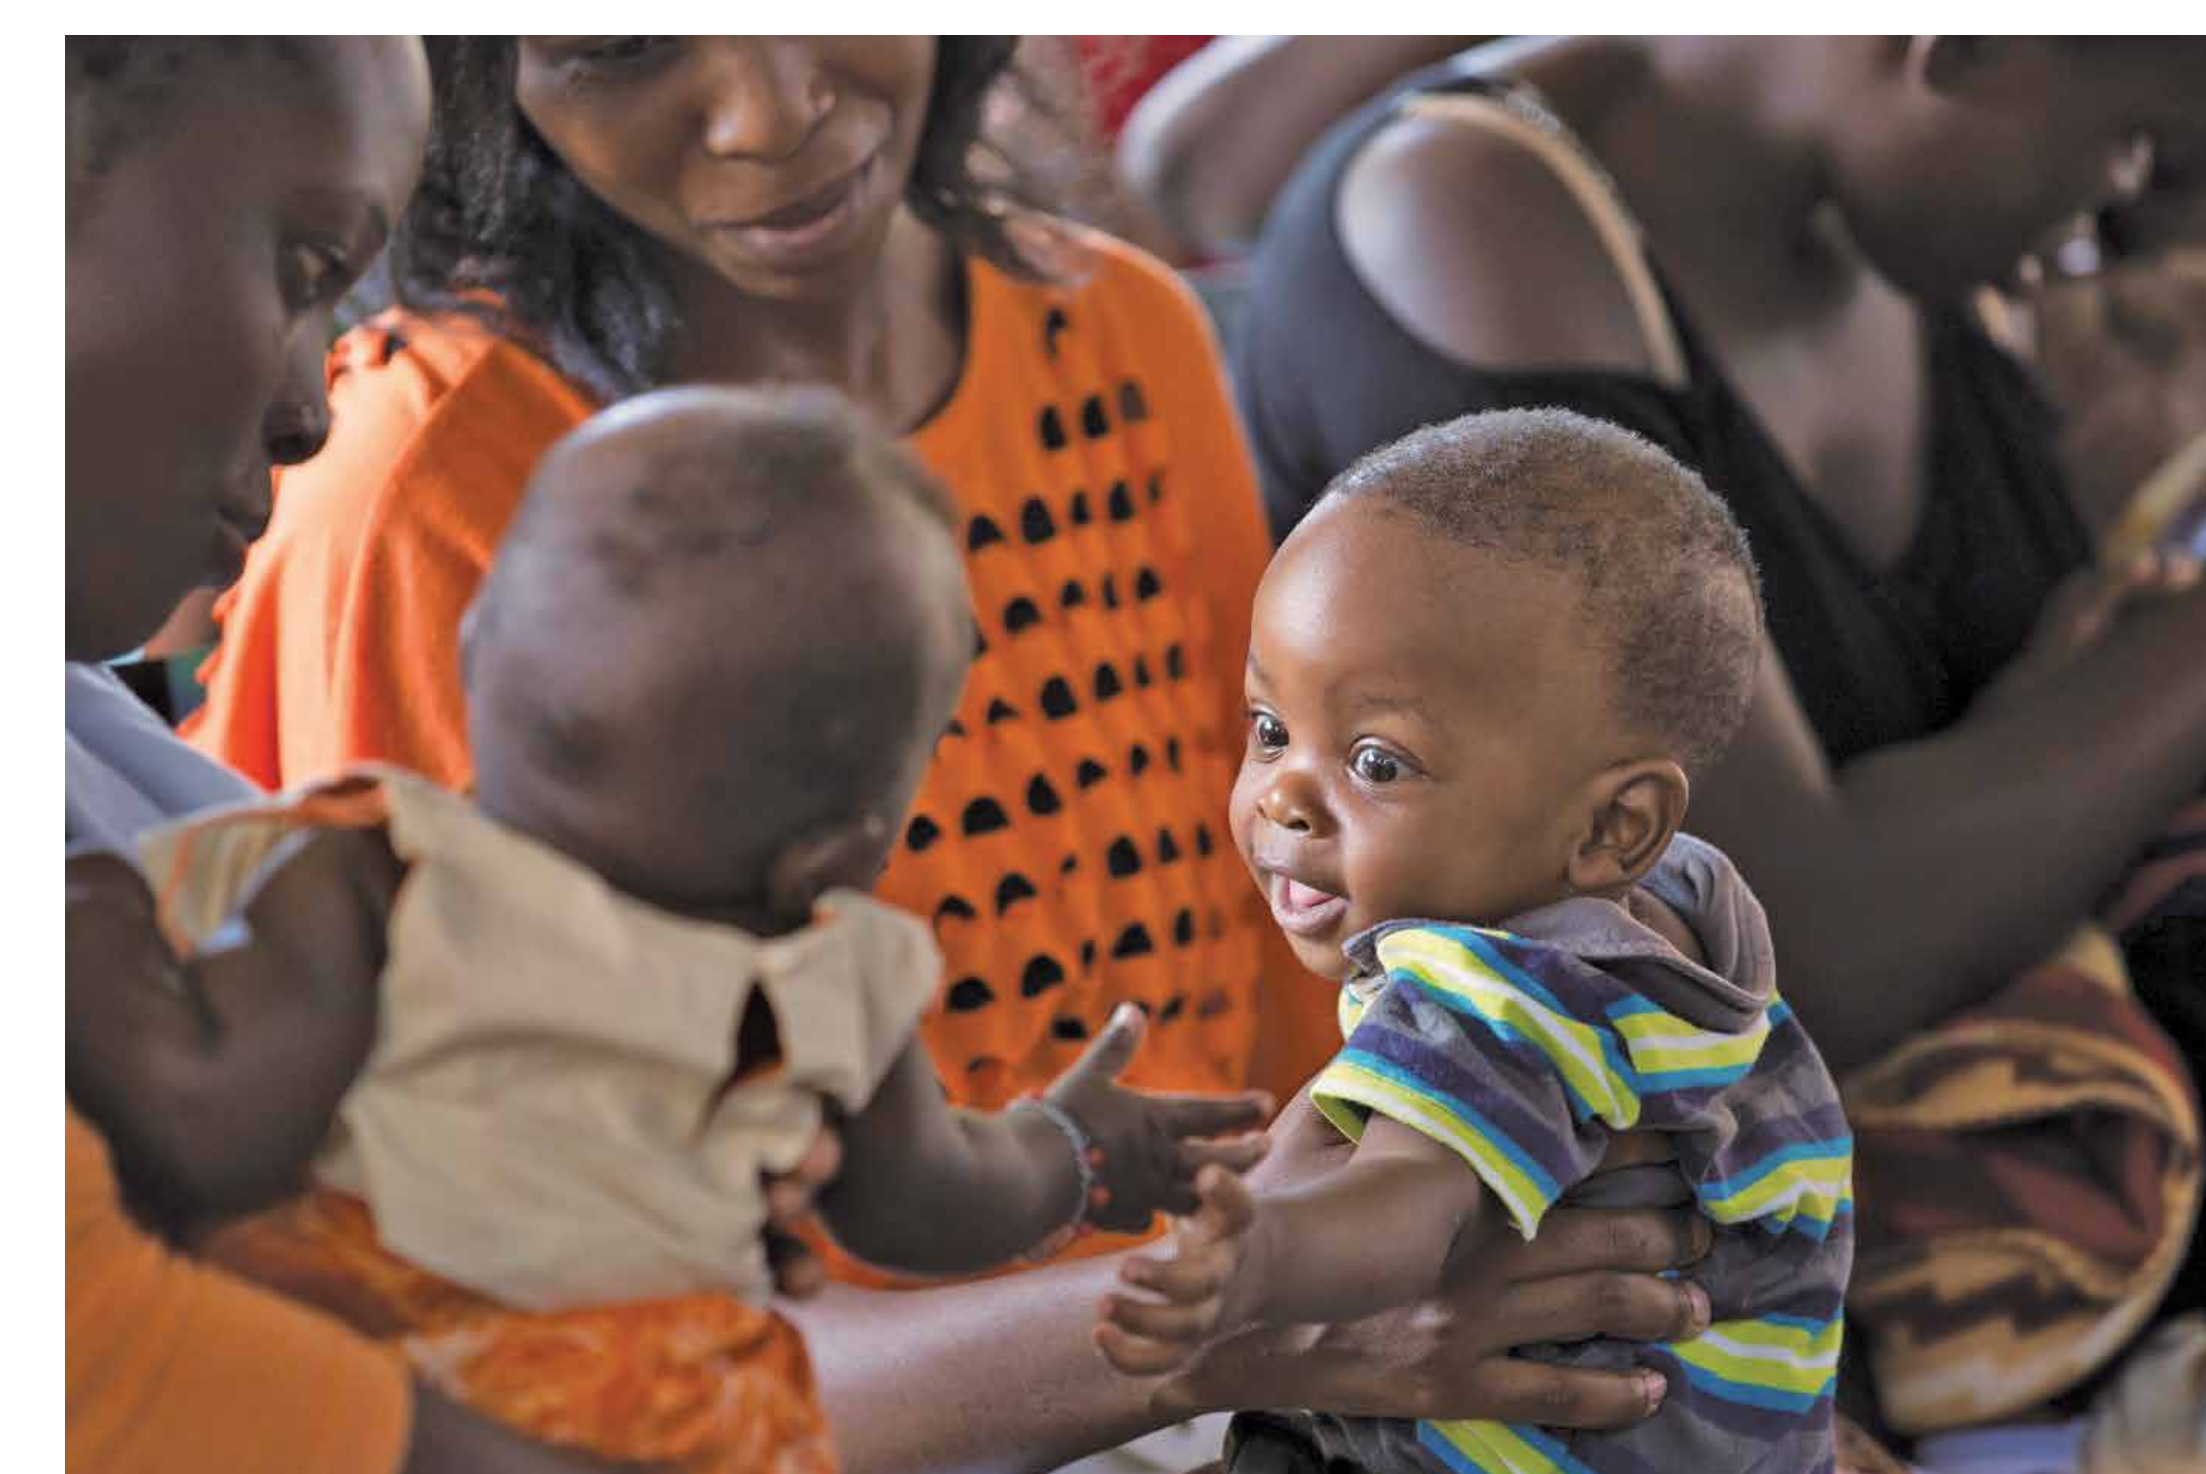

Key Achievements

- Developed and used tools to help develop and strengthen social health insurance. With support from the Rockefeller Foundation;
- Developed a Community-Based Health Insurance Financial Modeling Tool. This tool is being used by the Ministry of Health in Rwanda to estimate premium revenues, administration and provider payments to help them avoid financial deficits which can undermine the system.
- Developed the Social Insurance Assessment Tool, which helps countries assess options for expanding social insurance coverage & making decisions about social insurance policies.
- Developed the Financial Management Assessment Tool (FinMAT) helps managers assess their organization's financial management practices.

- We conduct economic analysis to help evaluate policies or to guide new policies. In Rwanda, for example, with a grant from the Rockefeller Foundation, we are analyzing household data to assess if the community-based health insurance scheme has resulted in equitable access for the poor.
- Through our work Nigeria and Ethiopia have developed road maps to the implementation of the UHC agenda
- We are a member of key Technical Working Groups convened with the respective country Ministry of Health in Kenya, Ethiopia, Nigeria, South Africa among other
